WATERSHED DECISIONS

An Activity for Youth Ages 12–18 and Adults

Learn about water quality issues surrounding small watersheds and the decision-making processes that go into improving those water quality issues.

In this hands-on activity, your small group represents new members of a community organization interested in improving local water quality. You'll examine simulated water samples, identify and explore the land users in your community, and then create a plan for improving your watershed on a limited budget.
